(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 45-50 are rejected under 35 U.S.C. 102(e) as being anticipated by Parkinson et al. (US 6,088,457).

5. Parkinson is a prior art reference cited by applicant on 1449, dated to 1/17/01.

6. As per claims 45-46 and 50, Parkinson teaches the invention as claimed including a wireless transmission system for transmitting programming data to a mobile device having a one-way radio receiver thereon, the transmission system including:

an originator component configured to receive the programming data and form a programming message indicative of the programming data [col. 9, lines 38-40 & 45-50];

a transmitter component, selectively coupleable to the originator, configured to transmit the programming message to the mobile device [col. 9, lines 40-42 & 50-55];

a mobile device processing component configured to receive the programming message and provide it to the radio receiver and to provide an acknowledge message in response to successfully providing the programming message to the radio receiver [301, Fig. 3; col. 4, line 64 – col. 5, line 10];

a mobile device synchronization component coupled to the mobile device processing component [303, Fig. 3; col. 5, lines 26-30]; and

a desktop computing device selectively coupleable to the mobile device and including a desktop synchronization component operable with the mobile device synchronization component to synchronize the acknowledge message to the desktop computing device, a desktop communication component selectively coupleable to the originator and configured to pass the acknowledge message to the originator [col. 9, lines 34-57].

7. As per claim 47, Parkinson teaches a radio transmitter configured to broadcast

the programming message to the radio receiver [col. 9, lines 28-31].

8. As per claim 48, Parkinson teaches a modem configured to transmit the programming message to the radio receiver [col. 10, lines 40-47].

9. As per claim 49, Parkinson teaches a portable magnetic storage medium, readable by the mobile device processing component, storing the programming message [305, Fig. 3].
